Summary

I am a junior front end developer (React JS). Many websites which I created using my skills in this field. I have a passion for learning new technologies and tools, and I am always eager to fill the missing gaps in my knowledge. My goal is to become a powerful developer who knows most of the tips and tricks with a lot of huge achievements.

Projects

E-commerce Application. Github Repo

- Created by React JS.
- It is a complete e-commerce application with real integration with database (back-end in route academy). It requires a register and log in to show the products, categories, cart, wish list, and brands. You can add any product to cart or wish list and you can see it later. There is an online payment in this project using free payment api link.

Yummy Application . Github Repo

- Created by React JS.
- It shows a lot of meals around the world. Just click on the meal to see it's category, recipes, area of preparing, link of youtube videos of how to prepare it.
- You can find any meal using categories or area or you can search for it by it's name.

Weather Application. Github Repo

- **Skills:** HTML, CSS, Bootstrap, Javascript.
- By using open weather API, this application shows the weather in any country around the world for three consecutive days with the speed of wind, and weather conditions.

Simple to do list Application. Github Repo

- **Skills:** HTML, CSS, Javascript.
- This application is for applying the basics of Javascript and how to add and delete elements from an array with saving it in the local storage.

4uhost Design Website. Github Repo

- **Skills:** HTML, CSS, Javascript, and jQuery.

- This site is for applying the basics of Javascript and jQuery.

Mealify Design Website. **Github Repo**

- **Skills:** HTML, CSS, Bootstrap.
- This site is for applying the bootstrap features.
- It's a website that works for a restaurant. It some images for meals and chefs who work in this restaurant.

Fokir Design Website. **Github Repo**

- **Skills:** HTML, CSS.
- This site looks like a portfolio for someone. It is created by native html and css..
